

MEAL-APPEAL

ABOUT

- ▶ Here you can add a recipe of your choice.
- ▶ You can read the recipe blogs of others too.
- ▶ It will help to try different recipes of different cultures as Indian ,Thai ,Chinese, Mexican, American.

INTRODUCTION

- ▶ Meal- Appeals is a food blogging website ,interlinking a gourmet interest in cooking with Blog writing and Food photography .
- ▶ It will be very helpful for Chefs ,Caterers , Home Chefs and Home Bakers .
- ▶ The project is totally built at administrative end and thus only the administrator is guaranteed the access.
- ▶ It will be very helpful for the people who love cooking and trying new recipe.

REQUIREMENTS

HARDWARE REQUIREMENT:

4 GB RAM .

128 GB HARD DISK.

1.6 GHz or faster processor are required .

Computer device

SOFTWARE REQUIREMENT:

SYSTEM SOFTWARE

Operating system (Windows 10)

Visual Studio (IDE)

Mongodb will be used for the development of the database

Node.js

- ▶ Node.js is an open source, a server-side platform built on Google Chrome's JavaScript Engine (V8 Engine).
- ▶ Node.js applications are written in JavaScript, and can be run within the Node.js runtime on OS X, Microsoft Windows, and Linux.
- ▶ Node.js applications never buffer any data.

MongoDB

- ▶ MongoDB is used as a database to store information of the user at its back-end.
- ▶ MongoDB uses documents that are in JSON-like format, known as **BSON**, which is the binary encoding of JSON
- ▶ MongoDB can run over multiple servers. The data is duplicated to keep the system up and also keep its running condition in case of hardware failure.

HTML

- ▶ HTML is the standard markup language for Web pages
- ▶ Links can also be added to the web pages so it helps the readers to browse the information of their interest.
- ▶ It provides the more flexible way to design web pages along with the text.

CSS

- ▶ CSS stands for Cascading Style Sheets.
- ▶ CSS describes how HTML elements are to be displayed on screen, paper , or in other media.
- ▶ CSS saves a lot of work . It can control the layout of multiple web pages all at once.

EXPRESS

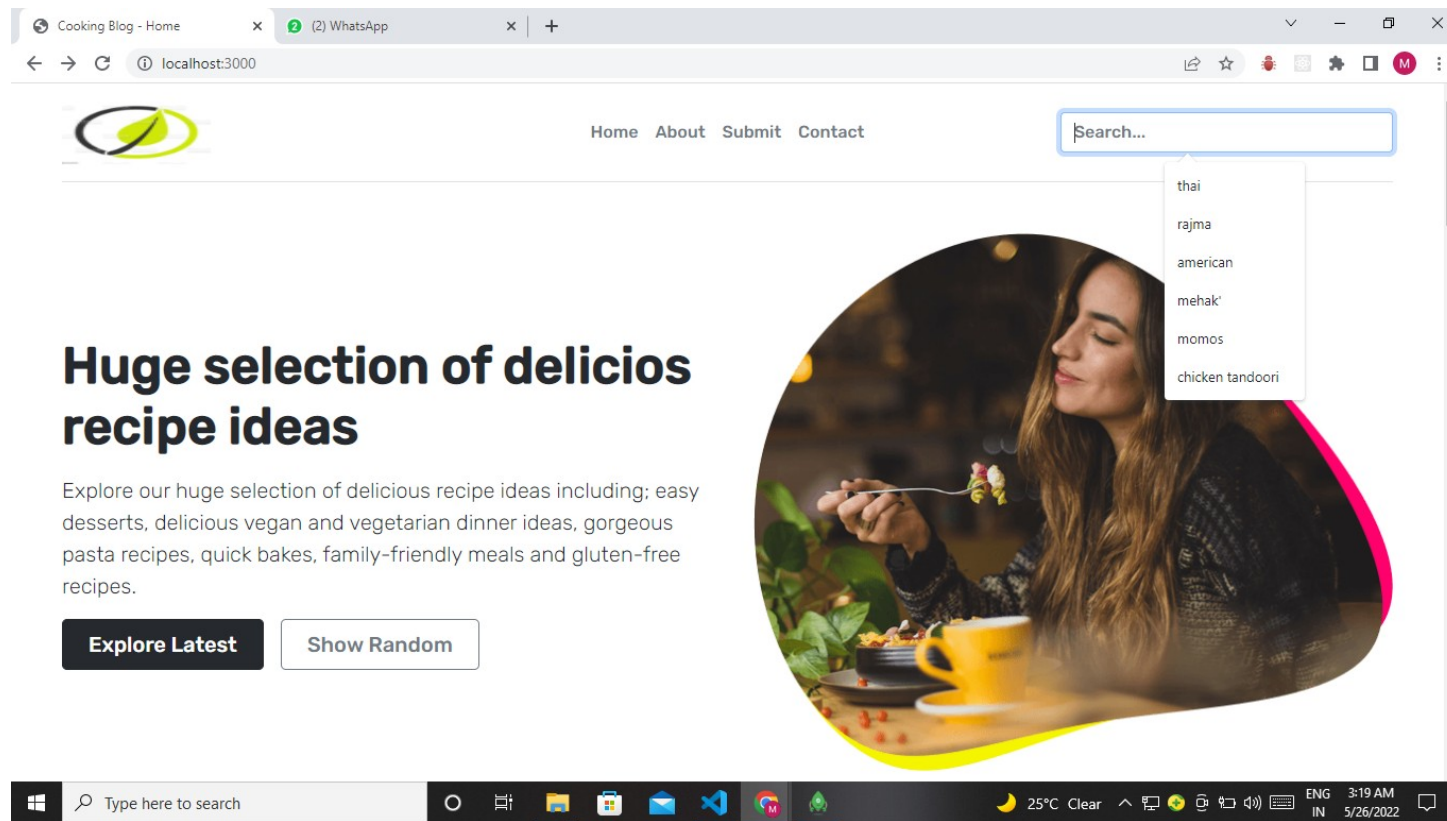

- ▶ Express is a framework that provides basic features for developing a web application in Node.js
- ▶ Allows to set up middlewares to respond to HTTP Requests.
- ▶ Allows to dynamically render HTML Pages based on passing arguments to templates.

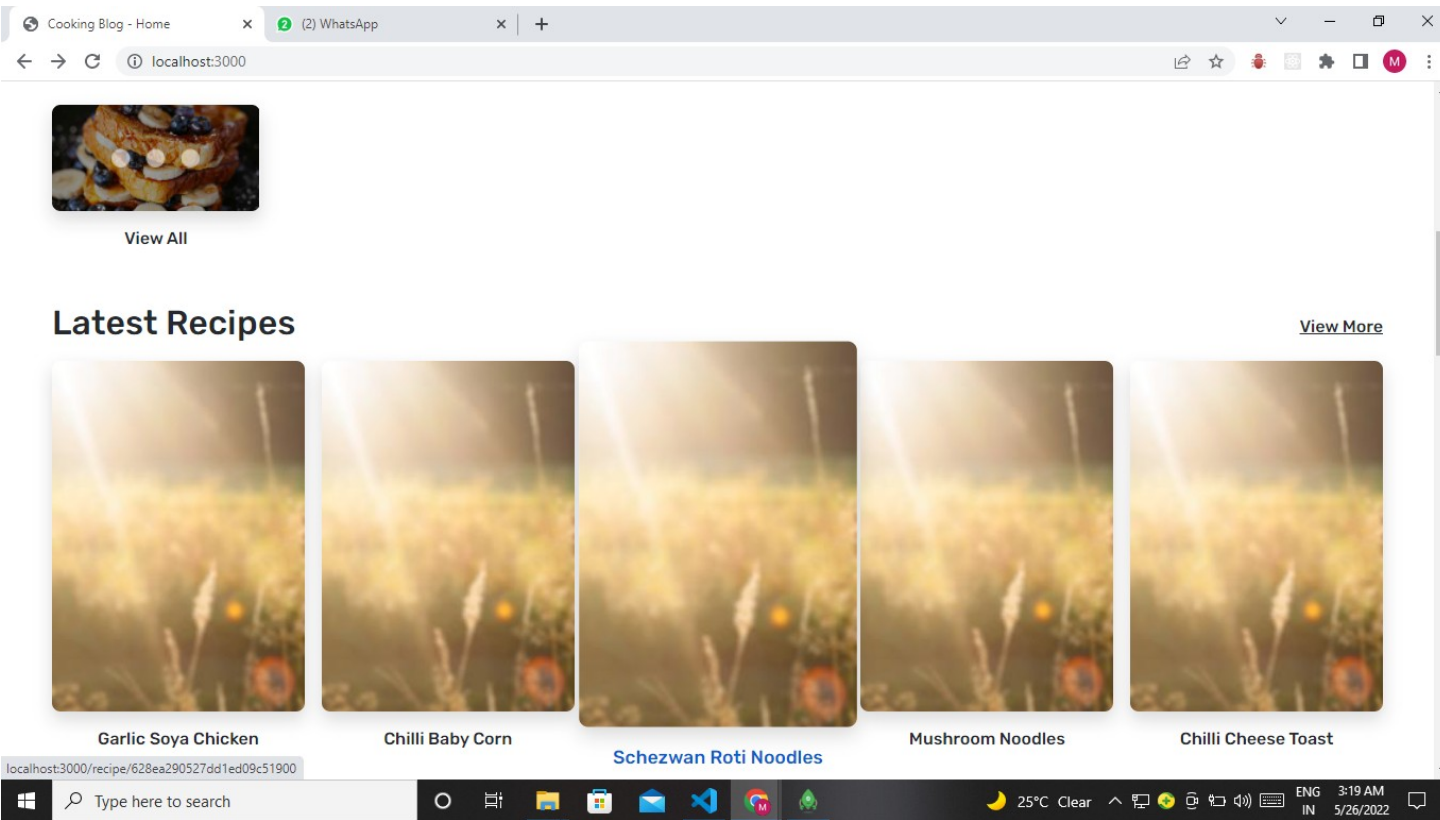

Mongoose

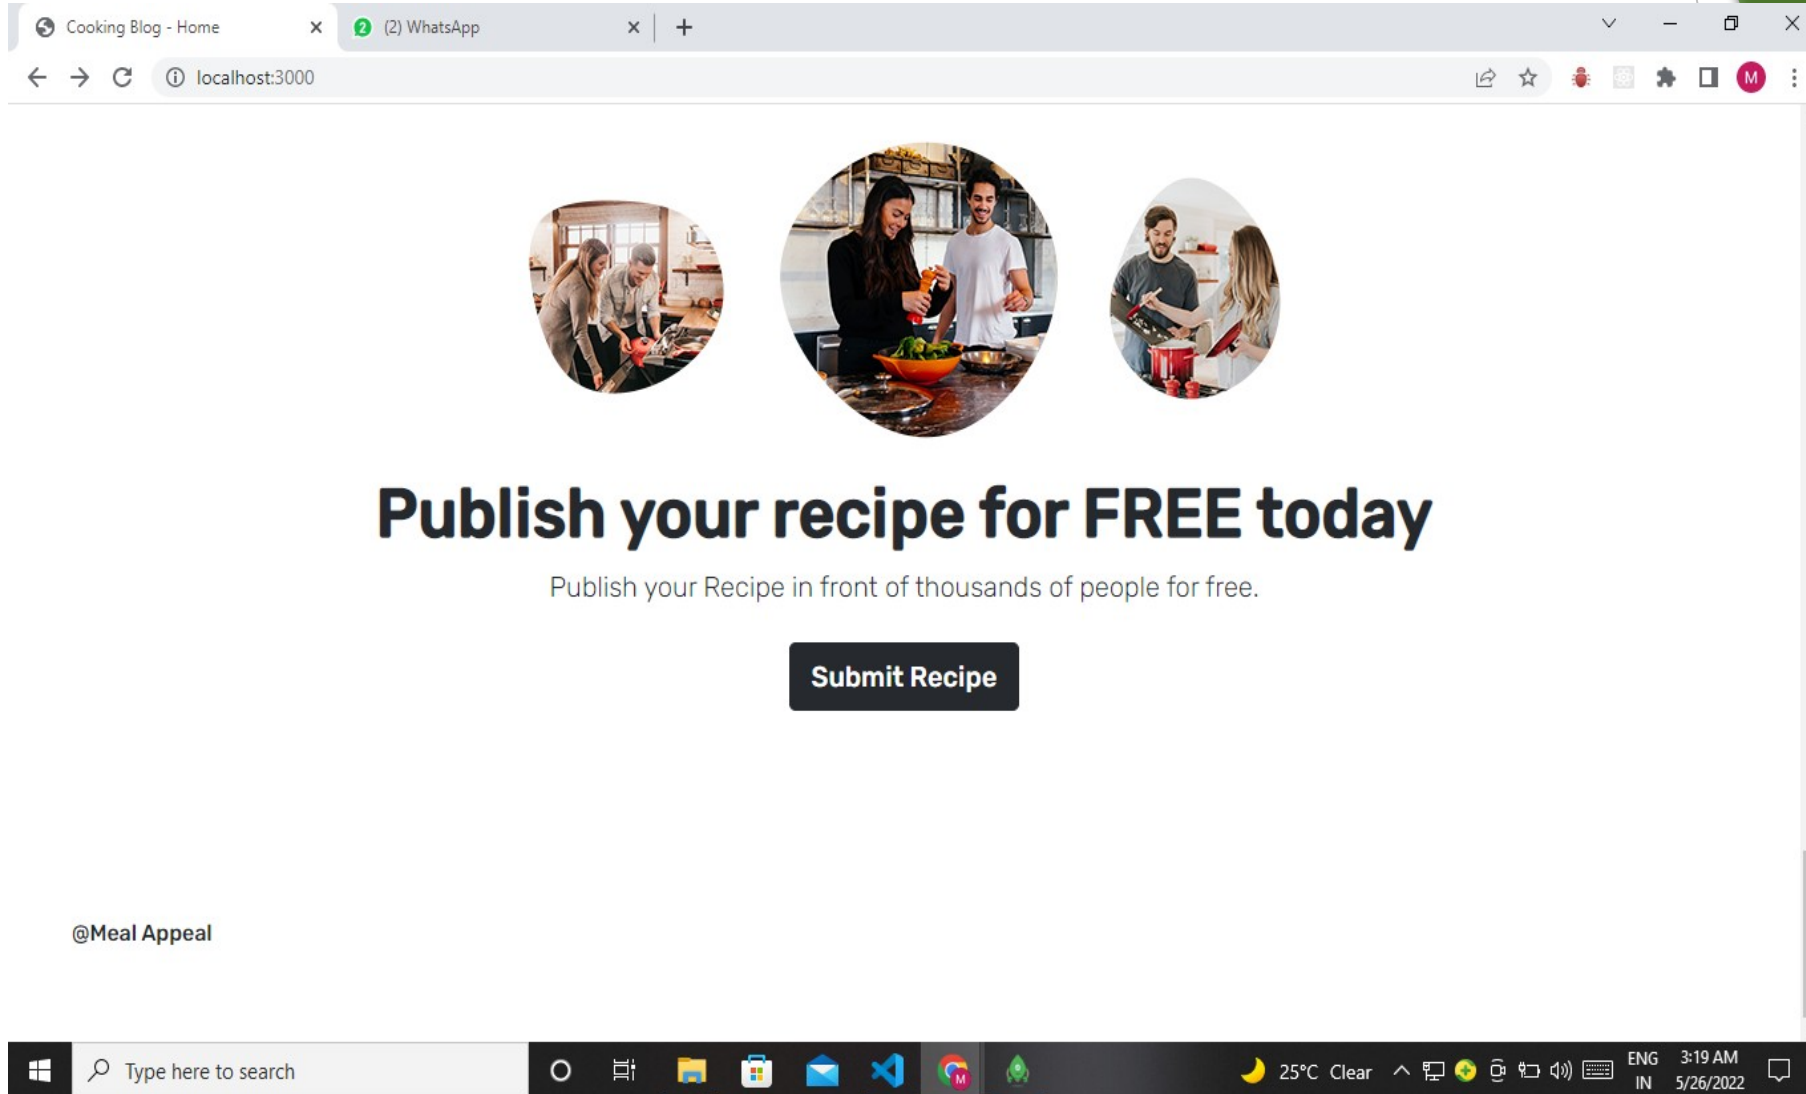

- ▶ Mongoose is a JavaScript object-oriented programming library that creates a connection between MongoDB and the Express web application framework.
- ▶ It manages relationships between data, provides schema validation, and is used to translate between objects in code and the representation of those objects in MongoDB.
- ▶ Mongoose is a third -party package that builds upon the official MongoDB driver , but it makes accessing MongoDB much easier and more convenient.
